DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 2/7/2006 is being considered by the examiner.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1 and 4 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/567,435. Although the conflicting claims are not identical, they are not patentably distinct from each other because an engine, a transmission, a generator/motor and a starter motor has been set forth in claim 1 of '435. The engine having a crankshaft, the transmission having an input shaft, the generator/motor disposing at a position sandwich between the engine and the transmission and the starter motor has been claimed in the previous claims of the patent number 10/567,435.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagano et al. (6,155,364).

Nagano et al. in figures 1-17, disclose a hybrid vehicle comprising an engine (42) having a crankshaft (not number, see figure 1), a transmission (46) that has an input shaft (84) joined coaxially to the crankshaft and an output shaft (not number, see figure 1) disposed in parallel to the input shaft (84), and is capable of changing the gear ratio

between the input shaft and the output shaft. Nagano et al. also disclose a generator/motor (48) that is disposed so as to surround the outer periphery of an axis (O1) of the input shaft at a position sandwiched between the engine (42) and the transmission. Nagano et al. also disclose power transmission means (50) for transmitting the driving force of the generator/motor to any position of a power transmission pathway between the output shaft and a differential gear (72).

The vehicle being capable of traveling by means of either one or both of the driving force of the engine and the driving force of the generator/motor; wherein the generator/motor is disposed coaxially with the axis and a starter motor (44) is joined to an end part of the input shaft on a side opposite to the engine. The starter motor disposed so as to surround the outer periphery of the axis at a position sandwiched between the engine and the transmission, which is joined to the crankshaft or the input shaft (see figure 15).
